

Introduce your patients to the gold standard of allergy testing: Specific immunoglobulin IgE testing. Our two distinct test panels, tailored for both food and respiratory allergens, are pivotal in diagnosing allergic diseases. By measuring concentrations, we can determine the risk level for symptomatic allergies.

Anyone presenting with allergy-like symptoms is an ideal candidate for our specific IgE blood testing. Partner with IHD Lab to offer state-of-the-art diagnostics and enhance patient trust and satisfaction. Let's collaborate for healthier outcomes!

RESPIRATORY

Allergen Profile, Respiratory, IgE 721
